Authorization for this examiner's amendment was given in a telephone interview with Patrick Muffo on 7/16/2009.

The application has been amended as follows:

In claim 1, line 14 after "properties"; insert -- , and the component tolerance is related to absorbing an error due to at least one of size, plumbness and mounting position --.

In claim 5, line 22 after "through-hole"; insert -- through-hole, and the component tolerance is related to absorbing an error due to a least one of size, plumbness and mounting position --

Allowable Subject Matter

2. Claims 1-8 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The best prior art of record, taken alone or in combination thereof, fails to teach:

Claim 1: a first contact for electrically connecting an internal conductor and said external wiring, and a second contact for electrically connecting said internal conductor

Art Unit: 2858

and said motor winding; wherein said second contact has a structure that is elastically deformable in accordance with a position of said terminal of said motor winding; and wherein the second contact is capable of absorbing a component tolerance at least due to its elastically deformable properties , and the component tolerance is related to absorbing an error due to at least one of size, plumbness and mounting position with in combination of the other elements of the claim.

Claim 5: a first contact for electrically connecting an internal conductor and said external wiring, and a second contact for electrically connecting said internal conductor and said motor winding; wherein said first contact has a structure for mating said internal conductor and said external wiring in a direction perpendicular to a motor rotational shaft, said motor winding is attached to said second contact in said rotation shaft direction, and wherein said second contact includes a plate-like fixed terminal formed to extend along an extending direction of said terminal of said motor winding, and electrically connected to said internal conductor, and a fixing member for fastening said terminal at the tip of said motor winding and said fixed terminal; and wherein the second contact is capable of absorbing a component tolerance at least due to having a through-hole that has a length sufficiently greater than the diameter of the fixing member to allow for translational movement within the through-hole, and the component tolerance is related to absorbing an error due to a least one of size, plumbness and mounting position with in combination of the other elements of the claim.
